

EZ series is a new generation pumps based on modern hydromechanics and mechanics theories. It has a complete range of pump models covering all kinds of working conditions. EZ series has been widely used in many Chinese projects, while more and more overseas customers recognize its superb performance.

- CAM design is based on the theories of modern hydromechanics and mechanics.
- Outer casing is made of grey cast iron or ductile cast iron.
- The wet parts adopt interchangeable anti-abrasive and anti-corrosive alloy material.
- The metric bearing is lubricated by oil; scientific lubricating and cooling system ensure that the bearing operates under low temperature.
- Complete range of pump models can meet various requirements and site working conditions.

❖ Structure

1. Front liner plate
2. Impeller
3. Volute casing
4. Support
5. Shaft
6. Mechanical seal
7. Mechanical seal box
8. Rear liner plate
9. Rear casing
10. Front casing

Note: this is the basic structural drawing. There is a little difference up to the varied discharge sizes.

Bearing Assembly

Scientific design with better cooling and lubricating performance than traditional grease lubrication

- Lubricated by oil;
- Easy maintenance;
- Prolong rotor service life.

Shaft Seal

There are three standard shaft seal methods:

- Packing seal: it is the lowest in cost.
- Expeller seal with packing seal: it is most commonly used.
- Mechanical seal: it has best seal effect, but high in cost and has strict requirement of flush water.

Material

The wet parts material for standard EZ series pump is high-chrome alloy. This kind of material is wear resistant and has excellent performance under erosive conditions.

- ❖ KmTBCr27: hard carbides within its microstructure provides strong wear resistance
- ❖ KmTBCr28: its hardness is 430 in Brinell and suitable for corrosive applications where pH is below 4.
- ❖ KmTBCr35: its hardness is 450 in Brinell and has much improved corrosion resistance.

❖ Performance Chart

Model	Allowable Max.Power P(Kw)	Clear Water Performance					Impeller Diameter D(mm)	WT. (Kg)

❖ Application

Series EZ slurry pumps are widely used in the mining, coal washing, power plant, metallurgy, petrochemical, building material, dredging, and other industrial departments, etc.

Typical Application:

- Iron Ore Dressing Plant
- Copper Concentration Plant
- Gold Mine Concentration Plant
- Molybdenum Concentration Plant
- Potash Fertilizer Plant
- Other Mineral Processing Plants
- Alumina Industry
- Coal Washery
- Power Plant
- Sand Excavation
- Building Material Industry
- Chemical Industry
- Other industries

200EZ-A60 in Mid-East Potash Fertilizer Plant

50EZ-A50 in Mid-East Sodium Silicate Plant
